EXTRA CLEAN AUTO DETAILING

The Comprehensive *Plan*

BUILT ON HONEST NUMBERS · CALIBRATED TO REAL CAPACITY

FOUNDATION · YEAR 1 SURVIVAL · YEAR 2 GROWTH · SCALING PATH

With realistic projections at 15-17 jobs/month stretch goal

WHAT'S INSIDE

Section 1 · The Honest Starting Point* Where you actually are right now*

Section 2 · Year 1 Survival Plan* Months 1-12 · Foundation building*

Section 3 · Year 1 Financial Projections* Realistic numbers for the next 12 months*

Section 4 · The Stretch Goal Pathway* Reaching 15-17 jobs/month by month 18*

Section 5 · Year 2 Growth Phase* Months 13-24 · The inflection point*

Section 6 · Year 3+ Scaling Path* Building toward the multi-vehicle fleet*

Section 7 · Operational Systems* What to build, when, and why*

Section 8 · The Sales & Marketing Engine***** How to actually fill the calendar*

Section 9 · Risk Management* What can derail the plan and how to protect against it*

Section 10 · The Discipline Required* What you must commit to for any of this to work*

Section 01

The Honest Starting Point

Where you actually are right now — no aspirational numbers, no comfortable fictions.

1.1 The current state — measured truthfully

Before any plan can be built, the starting line has to be honest. Based on your direct answers across seven questionnaire batches, here's where the business actually stands today:

METRIC	CURRENT REALITY
Monthly job volume	1-4 jobs
Average ticket per job	Under \$5,000 JMD
Service tier mix	100% Tier 0 (Quick Wash only)
Monthly take-home from detailing	Under \$20,000 JMD
Recurring clients	0-2 clients
Business cash reserves	None
Geographic concentration	Kingston / St. Andrew
Available work hours per week	10-20 hours
Equipment status	Functional but limits quality

METRIC	CURRENT REALITY
Vehicle for work	Nissan Serena S-Hybrid 2012 (acquired via Shuttle sale)
Existing debt — 800k loan	\$600k-\$750k remaining
Existing debt — 270k loan	~\$270k remaining
Total monthly debt service	~\$31,000 JMD
Maximum new debt tolerance	\$200,000 JMD ceiling

THIS ISN'T CRITICISM — IT'S THE FOUNDATION

These numbers represent where you start. Acknowledging them clearly is what makes the rest of this plan honest. Plans built on inflated starting points fail. Plans built on real numbers can be executed.

A NOTE ON THE VEHICLE

The Serena carries roughly 400-500kg payload — workable, but Nissan parts and mechanics are less common locally than Toyota equivalents. Budget for that friction (the tensioner/belt issue is the first example) rather than being surprised by it later.

1.2 What these numbers tell us strategically

THE CENTRAL PROBLEM IDENTIFIED

Every job you complete is at the lowest tier of service. You're working hard for the smallest possible reward per job. The equipment limits this. The sales conversation likely contributes too. Whatever the cause — this is the single most important thing to fix.

THE STRUCTURAL CHALLENGES LAYERED ON TOP

Limited capacity from your firefighter rotation. Existing debt consuming nearly 19% of your salary already. No reserves to absorb disruption. A vehicle that can't carry significant payload. These aren't deal-breakers but they shape what's realistically possible in the next 12-18 months.

THE GENUINE ASSETS YOU HAVE

- Stable primary income from firefighting that funds your life
- Operating in the highest-density market in Jamaica
- A pricing structure and service menu already designed
- Equipment that can deliver jobs even if not at premium quality yet
- A clear strategic mind willing to be honest about reality
- Faith, family, and health prioritized — protecting you from burnout

1.3 The single most important reframe

You are not in growth mode. You are in foundation mode. The difference matters.

Growth mode means scaling what's already working. Foundation mode means building what will eventually be worth scaling. They require different decisions, different

timelines, and different metrics for success.

THE YEAR 1 MINDSET

*If you finish Year 1 with consistent monthly revenue, several recurring clients, healthy reserves, and most clients booking Tier 1 instead of Tier 0 — you have succeeded enormously. That's **not modest**. That's the foundation that makes everything else possible.*

Section 02

Year 1 Survival Plan

Months 1-12 · Foundation building · Discipline over ambition.

2.1 What Year 1 actually looks like

Year 1 is not about building a fleet. It's about building a sustainable single-operator business that proves the model and creates the conditions for everything that comes later.

THE YEAR 1 SUCCESS CRITERIA

Twelve months from today, you should have achieved ALL of the following:

- Consistent 8-12 jobs per month minimum
- Average ticket per job risen to \$7,000-\$8,000 JMD
- At least 6 active recurring maintenance plan clients
- Cash reserves equal to 2 months of fixed business expenses
- Tier 1 Full Clean as your most-booked service (not Tier 0)
- Documented systems for booking, pricing, and service delivery
- A clear path to vehicle acquisition in Year 2

If you achieve these seven things in twelve months, you have built a real business. Not a side hustle. A business that's ready to scale.

2.2 Phase breakdown across the 12 months

MONTHS 1-3 — OPERATIONAL DISCIPLINE

The first quarter is about establishing rhythm and discipline rather than chasing growth. Specifically:

- Detail the Serena to your own standard now that it's replaced the Shuttle as the work vehicle
- Open a separate personal bank account dedicated to business income
- Create your simple client tracking spreadsheet (every job, every client, every payment)
- Take standardized photos on every single job — same 8 angles every time
- Send next-day WhatsApp follow-ups to every client

- Post WhatsApp Status content from every job within 24 hours
- Practice the upsell conversation — start trying to convert one Tier 0 client per month into Tier 1

MONTHS 4-6 — PRICING TRANSITION

The second quarter is when you actively reshape what you sell. Specifically:

- Stop accepting jobs below \$5,000 JMD with new clients
- Begin recommending Tier 1 as the standard for any client who doesn't specifically request Tier 0
- Introduce maintenance plan offer to your best repeat clients
- Set up Google Business Profile properly
- Identify one office park or residential complex to develop as an anchor location
- Begin saving aggressively — target \$10,000-\$15,000 JMD into reserves monthly

MONTHS 7-9 — VOLUME EXPANSION

The third quarter focuses on increasing job volume while maintaining the higher ticket sizes you've established:

- Target 10-12 jobs per month consistently
- First maintenance plan clients should be booking their second or third recurring service
- Refine your sales script based on what's actually working in conversations
- Reserves should hit \$50,000-\$80,000 JMD by end of month 9
- Begin planning Year 2 vehicle acquisition strategy

MONTHS 10-12 — FOUNDATION COMPLETION

The fourth quarter consolidates everything and prepares for Year 2:

- Hit consistent 12+ jobs per month
- Reserves at \$100,000+ JMD
- At least 6 recurring maintenance plan clients booking regularly
- Tier 1 has become the default service rather than Tier 0
- Begin marketing Tier 2 Deep Clean offerings deliberately
- Vehicle transition already executed (Shuttle sold, Serena acquired) — redirect this quarter's planning toward the Serena's reliability buffer instead

Section 03

Year 1 Financial Projections

Realistic numbers calibrated to your actual starting position.

3.1 Conservative Year 1 monthly trajectory

These numbers reflect a realistic ramp from where you are today to where you can credibly be in 12 months. They assume disciplined execution but no extraordinary luck.

MONTH	JOB	AVG TICKET	GROSS	COSTS	NET PROFIT
Month 1	4	\$5,000	\$20,000	\$5,000	\$15,000
Month 2	5	\$5,500	\$27,500	\$6,000	\$21,500
Month 3	6	\$6,000	\$36,000	\$7,500	\$28,500
Month 4	7	\$6,500	\$45,500	\$9,000	\$36,500
Month 5	8	\$7,000	\$56,000	\$10,500	\$45,500
Month 6	9	\$7,000	\$63,000	\$12,000	\$51,000
Month 7	10	\$7,500	\$75,000	\$14,000	\$61,000
Month 8	10	\$7,500	\$75,000	\$14,000	\$61,000
Month 9	11	\$7,800	\$85,800	\$15,500	\$70,300
Month 10	11	\$8,000	\$88,000	\$15,500	\$72,500
Month 11	12	\$8,000	\$96,000	\$17,000	\$79,000
Month 12	12	\$8,000	\$96,000	\$17,000	\$79,000

YEAR 1 REVENUE	YEAR 1 COSTS	YEAR 1 NET PROFIT
\$763,800	\$143,000	\$620,800

WHAT THIS ACTUALLY MEANS

By month 12 you're generating roughly \$79,000 JMD net profit monthly from detailing — nearly 4× your starting point. Combined with your firefighter salary, total monthly income exceeds \$329,000 with disciplined growth.

3.2 How that profit gets allocated

Year 1 net profit doesn't all become personal income. It serves multiple competing priorities. Recommended allocation:

ALLOCATION	% OF PROFIT	YEAR 1 TOTAL	PURPOSE
Owner salary	40%	\$248,000	Personal income from business
Cash reserves	25%	\$155,000	Buffer against disruption
Equipment fund	15%	\$93,000	Pressure washer upgrade, supplies
Vehicle fund	15%	\$93,000	Toward Year 2 vehicle acquisition
Loan acceleration	5%	\$31,000	Extra payment on 270k loan

THE OWNER SALARY REALITY

\$248,000 over 12 months works out to roughly \$20,500 monthly average. Combined with your \$250k firefighter salary that's \$270k+ monthly total — meaningfully more than where you started.

3.3 What this funds by end of Year 1

POSITION	AMOUNT
Cash reserves built	\$155,000 JMD
Vehicle fund accumulated	\$93,000 JMD
Equipment improvements made	\$93,000 JMD
Extra paid down on 270k loan	\$31,000 JMD
Total business position end-Year-1	\$372,000 JMD net assets

That's the position from which Year 2 becomes genuinely transformative — vehicle acquisition becomes viable, the 270k loan accelerates toward closure, and equipment supports the higher-tier services your business is now delivering.

Section 04

The Stretch Goal Pathway

Reaching 15-17 jobs per month by month 18 — what it requires.

4.1 The honest assessment of 15-17 jobs/month

Your stretch goal of 15-17 jobs per month by month 12-18 is meaningfully more ambitious than the conservative path. It's achievable but requires several things to happen in sequence:

- Demand has to roughly quadruple from current levels
- Average ticket needs to push toward \$8,000+ JMD per job
- Geographic clustering becomes essential for time efficiency
- Maintenance plan adoption needs to scale meaningfully
- Working hours likely need to reach the higher end of your 10-20 hour range

None of these are impossible. All five together is genuinely difficult. Hitting the 15-17 target requires every lever pulled simultaneously.

4.2 The stretch trajectory if everything aligns

MONTH	JOBS	AVG TICKET	GROSS	NET PROFIT
Month 6	10	\$7,500	\$75,000	\$60,000
Month 9	12	\$8,000	\$96,000	\$78,000
Month 12	14	\$8,500	\$119,000	\$98,000
Month 15	16	\$9,000	\$144,000	\$120,000
Month 18	17	\$9,500	\$161,500	\$135,000

STRETCH MONTH 18 NET \$135,000	STRETCH 18-MO TOTAL \$1.65M+	VS CONSERVATIVE +85%
--	--	--------------------------------

4.3 What needs to be true for the stretch to happen

DEMAND GENERATION HAS TO WORK AT SCALE

Hitting 15+ jobs monthly means 4 jobs per week consistently. That requires a steady inbound flow of clients — not occasional bookings. Specifically:

- WhatsApp Status posts becoming a real lead generator (not just visibility)
- Active referral cultivation producing 2-3 referred clients monthly
- At least one anchor community generating recurring volume
- Google Business Profile producing inbound calls weekly
- Maintenance plan clients providing predictable baseline volume

PRICING DISCIPLINE HAS TO HOLD

Higher volume often tempts founders to drop prices to fill the calendar. That destroys the entire economic case. The stretch only works if you maintain pricing while increasing volume — which means turning some lower-tier or below-cost requests away.

TIME EFFICIENCY HAS TO IMPROVE SIGNIFICANTLY

You can't do 15+ jobs per month at 10 hours per week. That math doesn't work. Either you operate at the 18-20 hour end of your weekly capacity, or you significantly improve efficiency per job through better routing, equipment, and process.

EQUIPMENT LIMITATIONS NEED TO BE ADDRESSED

Your current equipment limits you to Tier 0 quality. Hitting \$9,000 average ticket means consistently delivering Tier 1 and Tier 2 services, which requires better pressure washers and a more capable workflow. The equipment fund from Year 1 needs to actually be used for upgrades, not just accumulated.

THE REALISTIC VERDICT

The conservative plan is genuinely achievable with disciplined execution. The stretch plan is achievable with disciplined execution PLUS favorable demand conditions PLUS effective marketing. Plan for the conservative case. Treat the stretch as upside if everything aligns.

Section 05

Year 2 Growth Phase

Months 13-24 · The inflection point · Where the business becomes real.

5.1 Why Year 2 changes everything

Year 2 is when your business stops being fragile and starts being durable. Three specific things converge in Year 2 that fundamentally reshape what's possible:

THE 270K LOAN BEGINS CLEARING

With your accelerated payments from Year 1 surplus, the 270k loan should clear sometime in Year 2 — likely month 18-22. When it does, \$11,000 monthly returns to your cash flow permanently. That single change lifts your financial position by over \$130,000 annually.

CASH RESERVES ENABLE REAL CHOICES

Year 1 should still build reserves of \$155,000+ and a vehicle fund of \$93,000+ — but the Shuttle proceeds are no longer part of that Year 2 pool. That capital (~\$500,000–\$600,000) has already been deployed: the Shuttle was sold to fund the Serena, ahead of this plan’s original Year 2 timeline. Treat Year 2 capital planning as reserves-and-vehicle-fund only, with no Shuttle cushion behind it.

DEMONSTRATED TRACK RECORD OPENS DOORS

12 months of consistent operation creates credibility you don’t have today. Banks and credit unions evaluate businesses with operating history differently. Insurance becomes more accessible. Corporate clients consider you more seriously. Suppliers may extend credit terms. The track record itself becomes an asset.

5.2 Year 2 monthly trajectory

QUARTER	AVG JOBS/MO	AVG TICKET	MONTHLY GROSS	MONTHLY NET
Q1 (Months 13–15)	13–14	\$8,500	\$112,000	\$92,000
Q2 (Months 16–18)	14–15	\$8,800	\$127,000	\$104,000
Q3 (Months 19–21)	15–16	\$9,200	\$143,000	\$118,000
Q4 (Months 22–24)	16–17	\$9,500	\$156,000	\$129,000
YEAR 2 TOTAL REVENUE		YEAR 2 TOTAL NET	270K LOAN STATUS	
\$1.62M+		\$1.33M+	Cleared	

5.3 Year 2 strategic priorities

VEHICLE STATUS UPDATE — SERENA ALREADY ACQUIRED

The vehicle acquisition this section originally planned for months 14–18 already happened, earlier and differently than modeled: the Shuttle was sold directly into the Serena purchase rather than held as capital to combine with a full year of reserves. That changes what Year 2 vehicle capital is for.

- Original plan: combine ~\$93,000 vehicle fund + ~\$155,000 reserves + ~\$500,000–\$600,000 Shuttle proceeds → ~\$748,000–\$848,000 toward a Toyota Townace (Tier A, proper commercial payload)
- What actually happened: Shuttle proceeds went straight into the Serena (Tier B — workable, but 400–500kg payload and thinner local parts/mechanic support than Toyota)
- What this means going forward: the vehicle fund and reserves are no longer earmarked for *acquiring* a work vehicle — you have one. Redirect that saving toward

(a) a Serena reliability buffer, given the parts-scarcity risk already showing up as the tensioner/belt issue, and (b) a longer-horizon fund for the eventual Tier A upgrade (Townace or similar), now built without a Shuttle-sized capital injection behind it

- Confirm your actual current reserve and vehicle-fund balances against the \$93,000 / \$155,000 targets above — if the Serena purchase happened before those were fully built, the Year 2 timeline in this section needs to slide accordingly. This plan can't know that from here; you do

EQUIPMENT UPGRADE TO SUPPORT HIGHER TIERS

Year 2 is when you finally upgrade beyond your current battery pressure washers to a petrol-powered unit. Combined with the new vehicle's payload capacity, you can credibly deliver Tier 2 and Tier 3 services consistently. This unlocks the higher ticket sizes the projections assume.

FIRST EMPLOYEE CONSIDERATION

By late Year 2, if demand consistently exceeds your single-operator capacity, the first hire becomes viable. This is also when you would've stated you'd consider hiring per your own answers. The trigger should be specific:

- 3 consecutive months turning away or rescheduling clients due to capacity
- Reserves of \$300,000+ to absorb the financial uncertainty of first hire
- Service systems documented well enough to train someone effectively

5.4 Year 2 owner compensation

With significantly higher business profit, your salary should grow accordingly. Recommended Year 2 allocation of profits:

ALLOCATION	% OF PROFIT	YEAR 2 TOTAL
Owner salary	50%	\$665,000+
Cash reserves	15%	\$200,000+
Vehicle fund (next vehicle)	20%	\$266,000+
Equipment + business growth	15%	\$200,000+

Average monthly owner salary in Year 2 reaches roughly \$55,000 JMD. Combined with firefighter salary, total monthly income approaches \$305,000.

Section 06

Year 3+ Scaling Path

Building toward the multi-vehicle fleet · Realistic timelines.

6.1 Recalibrated fleet timeline

Earlier projections suggested a 4-5 vehicle fleet within 5 years. Based on your actual starting position, capacity constraints, and debt picture, the realistic timeline is longer but still achievable:

PHASE	YEAR	VEHICLES	TEAM	FOUNDER ROLE
Foundation	Year 1	1 (Serena)	1 (you)	Operator
Vehicle upgrade	Year 2	1 (Townace)	1 (you)	Operator
First hire	Year 3	1-2	1 + 1	Operator-Manager
Multi-vehicle	Year 4	2	1 + 1-2	Manager
Expansion	Year 5-6	3	1 + 2-3	Manager
Full fleet	Year 7-8	4-5	1 + 4-5	Owner

WHY THIS TIMELINE MAKES SENSE

Your debt clears around Year 3-4. Your reserves and cash flow only become strong enough to support multiple vehicles after Year 3. Hiring requires established systems that take 12-18 months to build properly. Each step depends on completing the previous one. Trying to compress this timeline is how businesses fail.

6.2 What each vehicle addition actually requires

VEHICLE 2 (YEAR 3)

Funded primarily through retained earnings from Years 1-2 plus accumulated vehicle fund. Used to support either:

- First employee operating in same parishes as you
- Or expanded geographic coverage with your operation in new territory

Cost estimate: \$1.0M-\$1.5M JMD all-in (vehicle + equipment + setup)

VEHICLE 3 (YEAR 5)

Funded through hybrid approach — retained earnings plus established business credit. By this point you have demonstrable financial history that opens financing options.

Cost estimate: \$1.2M-\$1.6M JMD all-in

VEHICLES 4-5 (YEAR 7-8)

Funded through proven business credit and operational cash flow. By this stage the business itself supports the financing rather than personal credit being the primary basis.

Cost estimate: \$1.5M-\$2.0M JMD all-in per vehicle

6.3 Long-term financial trajectory

YEAR	VEHICLES	TEAM	ANNUAL REVENUE	OWNER SALARY
1	1	1	\$760k	\$248k
2	1	1	\$1.6M	\$665k
3	1-2	1+1	\$2.5M-\$3.0M	\$1.0M+
4	2	1+2	\$4.0M-\$5.0M	\$1.5M+
5	3	1+3	\$5.5M-\$7.0M	\$1.8M+
6	3	1+3	\$6.5M-\$8.0M	\$2.0M+

YEAR	VEHICLES	TEAM	ANNUAL REVENUE	OWNER SALARY
7	4	1+4	\$8.0M-\$10M	\$2.4M+
8+	5	1+5	\$10M+	\$2.8M+

By Year 8, the business alone supports owner compensation that exceeds your current firefighter salary several times over. At that point your firefighter income becomes optional — you continue serving for love of the work, not financial necessity. That's the real long-term outcome of patient execution.

Section 07

Operational Systems

What to build, when, and why · Sequencing matters.

7.1 The systems sequence

You don't build all systems at once. You build them in the order that creates the most leverage at each stage. Here's the priority sequence:

PRIORITY 1 — CLIENT TRACKING (MONTH 1)

Before anything else, build a simple client tracking system. A basic spreadsheet works. Every job recorded with: client name, vehicle, service tier, price charged, date, payment received, notes. Without this, you can't see patterns or follow up effectively.

PRIORITY 2 — PHOTO DOCUMENTATION (MONTH 1)

Standardized 8-angle photo set on every single job. Stored in a labeled folder. This serves three purposes simultaneously — quality control, marketing content, and dispute protection.

PRIORITY 3 — BOOKING AND FOLLOW-UP (MONTH 1-2)

Google Calendar or simple notebook for tracking appointments. Next-day WhatsApp follow-up template you actually send to every client.

PRIORITY 4 — PRICING DISCIPLINE (MONTH 2-3)

Written pricing for every tier. Stop quoting prices verbally and inconsistently. Every client gets the same pricing structure presented the same way.

PRIORITY 5 — SERVICE PROCEDURES (MONTH 3-6)

Written step-by-step procedures for each tier of service. What products, what order, what time allocation. This is the foundation of eventual training but starts as your own consistency tool.

PRIORITY 6 — FINANCIAL TRACKING (MONTH 4-6)

Monthly P&L that you actually review. Income, expenses by category, profit. Without this you don't know if you're actually making money or just generating activity.

PRIORITY 7 — MARKETING SYSTEMS (MONTH 6-9)

Consistent WhatsApp Status posting schedule. Instagram presence. Google Business profile fully populated. Referral cultivation process.

PRIORITY 8 — QUALITY CONTROL (MONTH 9-12)

Standardized completion checklist. Client satisfaction confirmation before payment. Photo review process. This becomes critical when you eventually have employees.

7.2 The non-negotiable daily disciplines

Regardless of how busy or slow you are, these daily activities never get skipped:

- Update your client tracker after every completed job
- Take photos before, during, and after every job — same angles every time
- Send next-day follow-up to every client
- Post one WhatsApp Status piece daily, even on rest days
- Reconcile cash and payments at end of each day
- Review tomorrow's appointments and prep vehicle the night before

WHY DAILY DISCIPLINES MATTER MORE THAN SYSTEMS

*Systems work because you execute them daily. The most sophisticated system in the world fails if it's **executed inconsistently**. The simplest system in the world **succeeds if it's executed every single day**. Choose discipline over sophistication.*

Section 08

The Sales & Marketing Engine**

How to actually fill the calendar with the right clients.

8.1 The single biggest lever — Tier 0 to Tier 1 conversion

Right now 100% of your jobs are Tier 0 Quick Washes at under \$5,000. Converting just half of those clients to Tier 1 Full Cleans at \$8,000 changes your monthly economics dramatically. Same number of jobs. Significantly more revenue.

This is the easiest, fastest, highest-leverage move available to you. Specifically:

THE CONVERSION CONVERSATION

When a Tier 0 client contacts you, don't just confirm the wash. Have this conversation:

"Happy to come do that for you. Quick question — when was the last time the inside got a proper deep clean? Most cars need that every few months and it makes a huge difference. The Full Clean covers everything you need outside plus a complete interior detail. For your Corolla that's \$8,000 instead of \$5,000 — only \$3,000 more for what you actually need."

Some clients will say yes. Some will stick with the wash. Either way you've planted the seed. Over time the conversion rate climbs as clients understand what they're missing.

8.2 The seven booking activities

These seven activities, executed consistently, produce reliable booking flow. Pick three to focus on first. Add others over time.

- Daily WhatsApp Status posts with before/after content
- Three-times-weekly Instagram posts showing your work
- Active follow-up on every previous inquiry that didn't convert
- Weekly outreach to one new community or office building
- Direct partnership cultivation with adjacent businesses
- Promotional offers to fill specific calendar gaps
- Referral incentives to existing satisfied clients

8.3 The maintenance plan as your retention engine

Once a client books a Tier 1 or Tier 2 service, immediately offer maintenance plan enrollment:

“Most of my clients book this every 5-6 weeks to keep their car looking right. If you join my maintenance plan you get 10% off every recurring service and I send you a reminder when you’re due. Want me to put you down for early next month?”

Maintenance plan clients are worth significantly more than one-time clients. They book reliably, refer often, and become advocates for your brand. Year 1 success specifically requires reaching at least 6 maintenance plan clients by month 12.

8.4 The marketing rule that protects your time

You have 10-20 hours per week available. Every hour spent on marketing is an hour not detailing. The rule that protects you:

THE 80/20 RULE

Spend 80% of available hours on actual jobs and direct income generation. Spend 20% on marketing and growth activities. If you flip the ratio, you’re a marketer who occasionally details cars — that’s a different business and a worse one.

Section 09

Risk Management

What can derail this plan and how to protect against it.

9.1 The genuine risks at your stage

Every plan has risks. The mature founders identify them in advance. Here are yours, ranked by likelihood and impact:

RISK 1 — PRICING PRESSURE BREAKING YOUR DISCIPLINE

The most common way detailers fail is gradually accepting lower-priced work to fill the calendar. Each individual price drop seems small. Over months it destroys margin entirely. Protection: written minimum prices that you don't violate, even if it means turning work away.

RISK 2 — EXISTING DEBT STRAINING CASH FLOW

Your \$31,000 monthly debt service plus living expenses leaves limited room. A single major surprise — equipment failure, vehicle issue, family emergency — can force panic decisions. Protection: building cash reserves aggressively in Year 1 even at the cost of slower growth.

RISK 3 — BURNOUT FROM COMPETING DEMANDS

Firefighter shifts plus building a business plus protecting family/faith/health is a real load. Burnout in year one is the most common reason side businesses fail. Protection: explicit boundaries on working hours, scheduled rest days, and discipline about not working through them.

RISK 4 — EQUIPMENT FAILURE DURING A JOB

Your battery pressure washers are functional but have limitations. A failure mid-job costs you the client and the day's revenue. Protection: equipment redundancy (which you have) and prioritizing equipment upgrades from the equipment fund as soon as practical.

RISK 5 — STRETCHING BEYOND CAPACITY TO CHASE GROWTH

If you accept 17 jobs in a month at the cost of relationships, health, or quality — you've broken something to grow something else. Year 2 grows from a healthy Year 1, not from a depleted one. Protection: monthly self-check on all four pillars, not just business numbers.

9.2 The protections that must be in place**LIABILITY INSURANCE**

Speak with a broker about general liability coverage for mobile detailing. Cost: \$40,000–\$80,000 JMD annually. This is your protection against a client claiming damage. Don't operate without it past Year 1.

THE SIGNED SERVICE AGREEMENT

The contract document we created earlier needs to be used. Every client signs before service begins. This protects you from disputes and demonstrates professionalism.

CASH RESERVES DISCIPLINE

By month 6 you need at least \$50,000 in business reserves. By month 12 you need \$150,000. These reserves are untouchable for personal spending or growth ambitions — they exist specifically for crisis absorption.

EQUIPMENT REDUNDANCY

Two pressure washers means one can fail without ending your day. Maintain that redundancy. As you upgrade to a petrol washer in Year 2, keep at least one battery washer as backup.

HEALTH AND REST DISCIPLINE

At minimum one full day per week with no detailing work and no business activity. At minimum one full weekend per month entirely off. These aren't suggestions —

they're protection against the burnout that kills businesses in Year 1-2.

THE DEEPEST RISK PROTECTION

Faith, family, and health as non-negotiable boundaries — your own answer in our questionnaire. Hold to that. The founders who burn out are the ones who treat those as flexible. The ones who build durable businesses treat them as fixed.

Section 10

The Discipline Required

What you must commit to for any of this to work.

10.1 What this plan asks of you

Plans on paper are easy. Execution over months and years is the real test. Here's what this comprehensive plan specifically requires from you:

DAILY DISCIPLINE

- Photographing every job in standard angles
- Updating your client tracker after every job
- Sending follow-up messages to recent clients
- Posting on WhatsApp Status with quality content

WEEKLY DISCIPLINE

- Reviewing the week's revenue against your monthly target
- Reaching out to one new community or business location
- Following up on previous inquiries that didn't convert
- Posting at least 3 Instagram pieces

MONTHLY DISCIPLINE

- Full P&L review
- Pricing review — ensuring you're not slipping below minimums
- Reserve building check — depositing into business savings
- Strategic check-in on Year 1 progress markers

QUARTERLY DISCIPLINE

- Comprehensive review of what's working and what isn't
- Adjustments to pricing, marketing focus, or service offerings based on data
- Capital allocation review — vehicle fund, reserves, equipment
- Two-day rest period away from the business completely

10.2 The mindset that sustains all of this

THE FOUNDER'S TRUTH

Most service businesses fail not because the plan was wrong but because the exe-

cution drifted. The discipline of small daily actions — photos, follow-ups, tracking, posting — is what compounds into business success. Skip them and the best plan in the world produces nothing.

You are not building a detailing business in 12 months. You are building habits in 12 months. The detailing business is the byproduct of those habits compounding.

10.3 The single commitment that matters most

If you commit to nothing else from this entire plan, commit to this:

Operate every single day of the next 12 months as if everything you've planned is real. As if the systems matter. As if the discipline matters. As if the patience matters. As if the long-term vision is worth protecting through short-term sacrifices.

Twelve months from today you will either be a different person running a different business — or you will be exactly where you are today wondering why nothing changed. The variable is not the plan. The variable is your daily commitment to executing the plan.

—

The plan is built on honest numbers.

Calibrated to your real capacity.

Now go execute.
